

Optimising facilities and supporting green initiatives

BAE Systems needed a better way to manage their facilities across 26 UK sites. Their goal was to streamline their operations, cut costs and reduce their environmental impact.

Mitie has been awarded a five-year, multi-million-pound contract to help them meet these ambitions. We're now managing various services for BAE Systems, including building maintenance, cleaning, waste management, landscaping, mailroom services, energy management, catering and pest control. By bringing all these services under one roof, we make everything run smoother for less.

With access to our industry-leading technology, BAE Systems can now see how tasks are progressing, track completion times and make sure everything operates as it should—whenever and wherever they are.

Our Plan Zero team is also helping BAE Systems meet their sustainability goals by reducing the environmental impact of their sites.

This partnership shows how effective facilities management can enhance operational efficiency and support sustainability goals. We're ISO 44001-certified, which means we're committed to empowering our clients. As we continue to collaborate with BAE Systems, they can expect a more streamlined, transparent and environmentally conscious approach to managing their facilities, effectively enabling better military output through superior support services.
